Click! . . . Over and over between dusk and dawn hundreds of times a month - thousands of times a year - your finger-tips repeat that simple motion until it is automatic and unthinking.

But suppose you let yourself in late some night and flick the switch - and nothing happens! No light anywhere! Imagine your emotion as annoyance gives way to confusion, concern and fear. Something's seriously wrong when the lights won't work!

The very fact that you do take electric service for granted is a tribute to the men and women who supply it. They've made it dependable - and they've made it cheap. The average American family gets twice as much electricity for its money as it did 10 to 15 years ago and has many more appliances to make life pleasant.

The big job now is powering industry - the roaring factories that are making tanks, planes, ships and guns. That job, too, the electric companies have done so well that Uncle Sam is far more power-full than all the Axis countries combined.

This power is possible - and this war will be won - for the same reason - the American tradition of freedom. Freedom of business management under Government regulation - freedom to make our own laws - live our own lives - freedom to invent, invest and produce for everybody's benefit. . . . That is the American Way - the absolute opposite to the Hitler system of political management and state slavery.

America's strength today shows that the American Way has worked. It proves that practical business management is meeting the needs of this way of life.
